

**BROVITAL** is a liquid aromatic acidifier that combines the typical effect of acidifiers (reduction of pH and anti bacterial action) with the parasiticide and bactericide effect of aromatic plant extracts. This combination has the capacity to enhance the production of endogen enzymes and has also a powerful antioxidant effect. Thanks to this specific combination in **BROVITAL**, the nutrient resorption is stimulated and negative micro-organisms (bacteria, moulds and parasites) are controlled.

The herb extracts of Brovital in the drinking water reduce the impact of a coccidiosis infection of the bird.

**BROVITAL** reduces the pressure on the immune system thus enhancing the genetical growth potential

**BROVITAL** contains products approved and allowed in accordance with EC regulation no 1831/2003, released November 2007.

#### What are the advantages of Brovital?

Brovital is **not** an essential oil.

Brovital contains **Natural** plant extracts!

Brovital contains organic and non-organic acids.

Brovital contains **all** the **natural** essential elements for a good broiler performance during the last week of their life.

Brovital reduces the pH of the drinking water and inhibits Algae and Mold growth.

#### Why?

Brovital contributes to a healthier broiler intestinal Micro Flora.

**Improves** the broiler's genetical potential.

**Improves** the broiler's weight gain during the last week of growing.

**Improves** the broiler's compensatory growth.

**Stimulates** the broiler's enzyme secretion.

**Is added** to the drinking water ( 0,5 liter/1000litres) one week before the slaughtering date during the first 5 days.

**Cleans** the drinking water system.

**Gives** an excellent cost benefit ratio.

**Reduces** ammonia in the litter.

**Therefore** supports dry litter.

**Acts** as an antioxidant.

Detailed trial results are at your disposal.
